

DRONE SURVEY vs TRADITIONAL SURVEY

DRONES = FAST, ACCURATE & EFFICIENT!

Surveying using drone technology is the latest and most accurate method for producing data that all surveyors will find invaluable. The drone gives access to locations that would otherwise be impossible to achieve using traditional surveying methods. Fast and time efficient, pass the savings onto your client and benefit from a new revenue stream that benefits all.

ACCURATE AND EFFICIENT DATA

With a drone survey you can collect a limitless amount of photo and video data. Utilising this data can help you create accurate reports as well as presenting it in a variety of formats such as: Point Cloud 3D imaging, 2D orthophotographic mapping and GEO tagged data for map integration.

REDUCE SURVEY COSTS AND FIELD TIME

Using a drone to capture topographical data is **5X FASTER** than traditional surveying methods.

As using a drone involves less manpower, costs can be reduced and efficiencies increased. The data produced is same day for fast-track operations.

ACCESS THE UNACCESSIBLE...

A drone survey will give you access to the IMPOSSIBLE! Being able to direct and position the aircraft to any point in space you will get the birds-eye view from every angle. We collect you the information that would otherwise have been unobtainable in the past.

Established in
2014

completed over
300
drone surveys

Commercial License
Holders from the
CAA

3RD PARTY
liability and public
liability insurance

operating throughout
the UK (London
based)

SAFETY IS KEY, FORGET SCAFFOLD, LADDERS & PLATFORMS
